# PEOPLE VALUE

European leader in the production of isothermal trucks and kits since 1981

100% MADE IN ITALY

# IFAC has been my world since 1981.

## **A moral value, first and foremost**

My name is Angelo Amodio. IFAC has been my world since 1981. A sector leader representing a model of robustness experiencing constant growth.

Right from the start, when IFAC was just an idea or at most taking its first steps, I projected my mindset on this business model. My way of interpreting the world of work, of striving to reach goals, managing to achieve them and setting new ones.

Here a mindset was instilled, that of teamwork, sharing, and the philosophy of “growing together and everyone growing”. Of cohesion towards a goal, of the search for quality, of always respecting that which surrounds us. Of achieving job satisfaction, working in harmony in a place where you spend most of the day.

A place where you grow. A place where there has always been a passion for what you do. This is how a family company has transformed into a successful business. Hence, IFAC has become a big family.

100% MADE IN ITALY

**Acquaviva delle Fonti (BA)**

# “The company.

## Our 100% made in Italy group

We anticipate the future of isothermal transportation with technologically advanced systems and materials.

One of the most important Italian companies producing isothermal trucks and kits, **IFAC** is today regarded as a leader in its sector, thanks to its innovative technical skills, its vast management experience and the dynamism of its staff.

**IFAC** was founded in 1981 in Castellana Grotte (BA) and later moved to Conversano (BA). In order to plan for its future and be able to achieve the highest levels of quality and full respect for the environment, in 2007 the company chose to build a new premises in Acquaviva delle Fonti, with the acquisition of cutting-edge technology and robotic systems, adding 20,000 sqm of indoor space and 20,000 sqm of outdoor parking. In order to cut order processing times for our customers, in 2018 we opened a new wing with an additional 8,000 sqm for a total of 28,000 sqm.

**Trezzo sull'Adda (MI)**

# “ Milan.

## A reference point in Northern Italy

  
**2020**  
WELCOME  
MILANO

Approaching the milestone of forty years in business, we realised that our customer base has grown considerably. We receive requests from them directly but also from European dealers, to be able to count on a reference point in Northern Italy, so as to speed up and optimise all the after-sales phases and, more generally, respond to their needs more quickly. So we decided to meet these needs by opening a new office. We opted for Trezzo sull'Adda, an industrial centre located in the Milanese hinterland, already an important European hub.

Our Trezzo sull'Adda facility bears all the hallmarks of IFAC: a welcoming area for our customers and a well-equipped and technologically advanced department fully in line with the times. We have therefore transported warmth, professionalism and customer care to Lombardy. The facility, located along the A4 Turin - Trieste motorway, near the Trezzo sull'Adda motorway exit, boasts an internal area of 3,000 sqm and an external space of 10,000 sqm. The Milan site focuses on the commercial side, the assembly of isothermal fittings and after-sales support.

# The group is the true soul of the project.

**Each member with their own professionalism,  
with their own spirit of sharing**

Fully aware that there can be no growth, no progress, and that nobody can reach the top on their own. Even with all the preparation and skill in the world, IFAC is strengthened every day by the group that is the true soul of this project.

Each member with their own professionalism, with their own spirit of sharing. With the ability to complement each other, with the desire to work hard every day, all aiming for and pursuing a common goal. With the rules of the game always in mind, with respect for people and for the things that surround us.

Only those who share our values are welcome to join our team. Only those who know how to make them their own belong to IFAC.

**We are  
enthusiastic  
about the future.**

**Those who turn to us make a pact**

We acquired this mindset in the past. The founding values, the team spirit. We continue them to this day.

And with a sound basis and strong foundations available for every single project, we look forward to the future with enthusiasm.

We have grown. We have become a business that is a reference point for the sector and for the entrepreneurship of our area in general. But we are clear where our future lies.

# “Our technologies.”

**Total quality, industrial production**

For forty years, **IFAC** products have stood out due to the pursuit of one standard: **total quality**.

It all starts with the **SolidWorks** design system, ideal for integrating the different phases of the design process for each truck. This is supported by the use of cutting-edge materials with exceptional structural properties, the focus on quality and environmental safety and the processing methods used on the new high-tech systems.

The importance of total quality and the value of research & development represent the strengths that differentiate IFAC from its competitors in its target market.

# Our strengths.

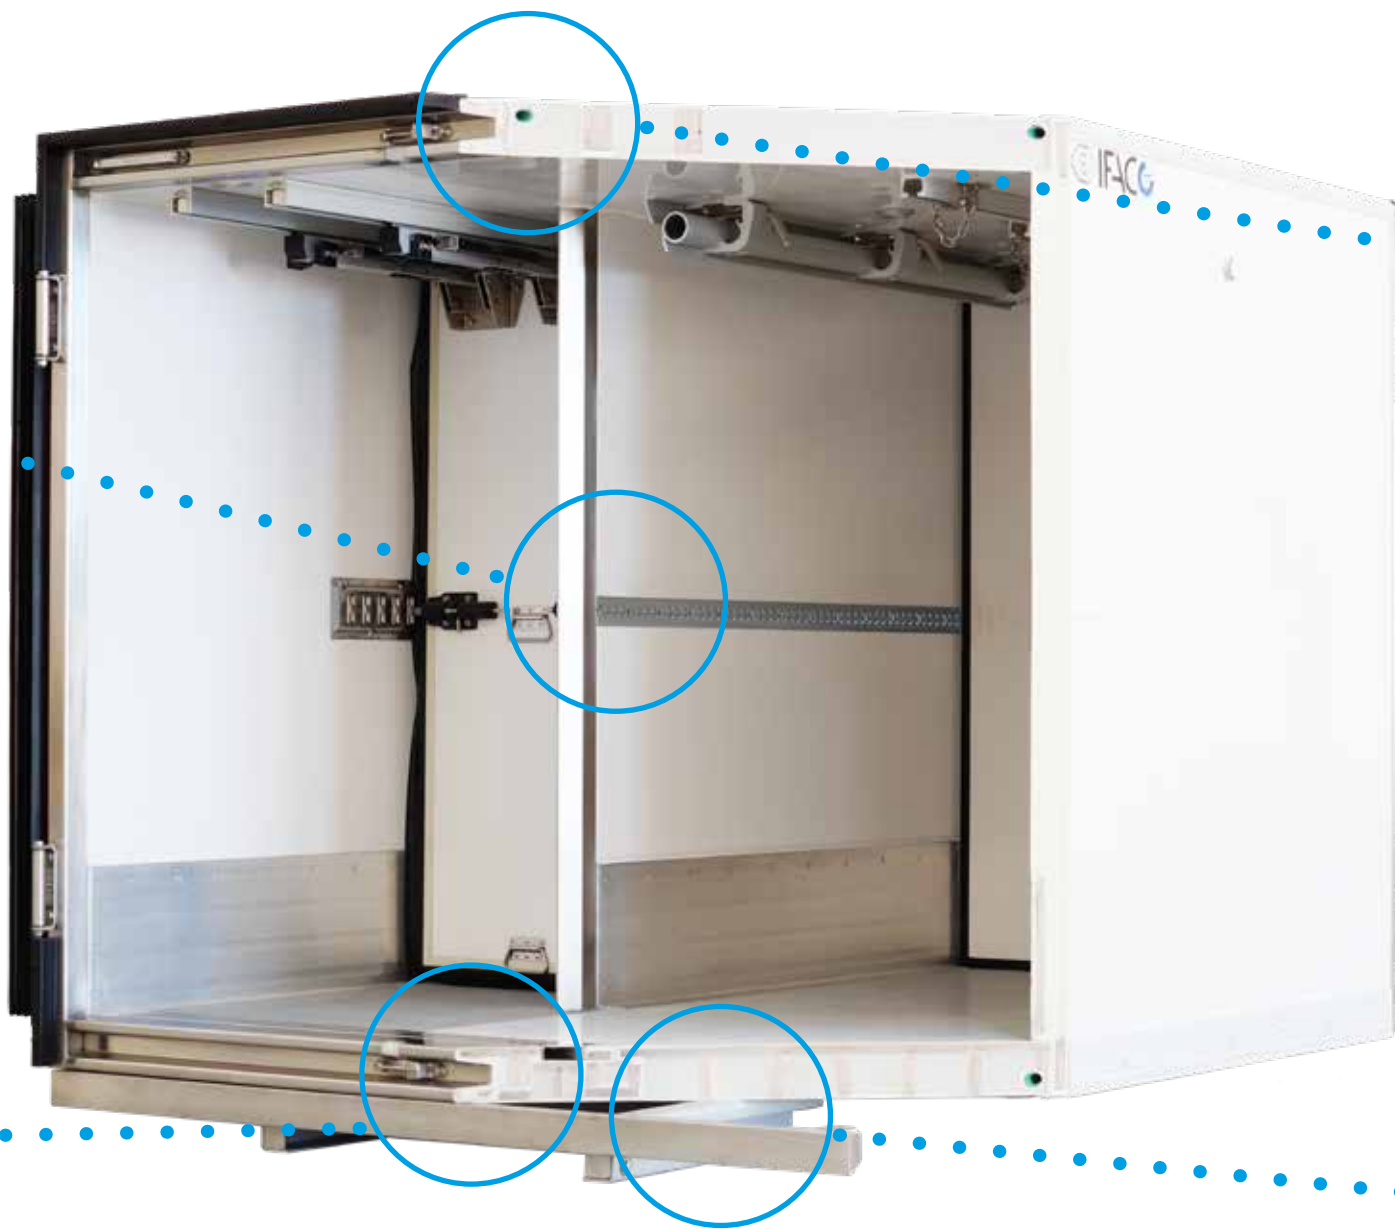

**the new combi rail entirely in aluminium, which can be positioned at any height, ensures proper anchoring of the load during transport**

**stainless steel rear doorframe incorporated into the panel during the production phase**

**multilayer and steel reinforcements, wrapped in 3D composite fabrics**

**inspectable electrical system,  
completely embedded in the  
panel during the production  
phase**

**anodised aluminium subframe  
designed to reduce the weight  
of the vehicle and increase the  
maximum load**

## **max 7 t.**

Excellent solutions and product customisations.

Functional and ideal especially for any small distribution delivery. Manufactured with materials with a high strength to weight ratio to ensure maximum load capacity. A high level of product customisation with shelves, doors and compartments to satisfy all customer needs.

## **max 19 t.**

Long-term practicality and reliability.

Small enough to get around in and out of the city, large enough to carry the maximum volume always called for in this sector. Nowadays, customers demand ever-increasing versatility and long-lasting reliability of the product. Made with cutting-edge materials with exceptional structural properties. IFAC trucks are designed to achieve the highest quality and long-term utmost safety.

## **max 26 t.**

A growing sector offering increased load capacities to meet today's growing needs. Trucks that not only stand the test of time but add value to your transport, thanks to a wide range of optional extras and configurations.

“

# Our solutions.

**“Tailor-made” to your needs**

## semi-trailer

Created for long-distance transport. Maximum capacity, maximum flexibility (max internal height 3,000 mm) and maximum durability, obtained thanks to the use of our frames with corrosion-proof anodised aluminium beams.

## truck & trailer

IFAC is able to design and customise ‘the right tool for your job’. Fittings mounted on both truck and trailer, connected by aluminium footplates, for a total load capacity of 38 euro-pallets.

# Our isothermal kits.

## Panels kit

It includes:

**Isothermal panels:** flooring, roofing, side walls, headwall, doors. **Thicknesses:** 40mm - 50mm - 60mm - 80mm - 100mm - 120mm // Rear and side stainless steel door embedded in the walls, roofing and flooring // **Door accessories:** hinges, handles, seals // External perimeter profile in anodised aluminium ready for assembly // Interior or exterior LED lighting // Assembly adhesive // Available sizes from 3 m up to 13.55 m.

## Assembled kit

To strengthen the excellent partnerships with customers, IFAC has focused greatly on technical support by supplying assembled **panel kits**, ready to be mounted on the frames directly by the dealers.
